"We add a competitive advantage through better managed distribution of product and provide our customers greater control and easy access to a global marketplace."

We keep your business moving

At Axsun, we have built on the extensive experience of our management team to become a leading North American intermodal provider. Our integrated mix of services also includes highway, logistics and warehousing capabilities.

We are one of North America's first transportation companies to incorporate SAP technology and as a result, our customers have gained increased access to vital shipment information and the tools they need to manage their business more effectively.

We offer a hybrid model of asset and non-asset based transportation and distribution services. We add a competitive advantage through the precise execution of your requirements throughout North America... and beyond.

We make the shipper's life easier with SAP technology

At Axsun, we invest in our business, our business relationships and the people who make our business successful.

With Axsun, customers experience a seamless set of integrated, cross-functional business processes that make the management of their supply chain easier. The overall benefits are extensive and are a direct result of these "SAP based" improvements to our operations which include:

- Improved alignment of strategies and operations in real-time to access and identify concerns early and implement proactive solutions
- Improved operational efficiency and productivity within and beyond operations
- Reduced costs through increased flexibility and well defined processes
- Increased financial control through deep visibility and business analytics

"We have invested in the resources necessary to provide the FCL intermodal capacity and coverage you require."

A lifetime of North American intermodal experience

Our customers rely on us as the experts in the door to door shipment of their product across all NAFTA borders. Our expertise in intermodal shipping between Canada, the USA and Mexico is derived from decades of experience and a desire to create proactive, cost-effective and well managed solutions for our valued customers.

Axsun is one of the few North American companies that specialize in cross-border full load intermodal service. Our partnership approach to managing your intermodal freight requirements continues to satisfy our customers and grow our business. Our management

has decades of intermodal experience and solid industry contacts that make the multi-rail network in the USA virtually seamless.

We have well established relationships with all North American railways and have our own 53' containers to supplement your requirements, adding capacity and greater control. Our down to business attitude, attention to detail and communication-rich environment translates to superior service, versatility and unmatched intermodal performance.

North American over the road services

We continue to invest in the necessary equipment to offer over the road service for our clients. We focus on short haul requirements with our fleet resources. For added capacity and serving long haul markets, we use a combination of owner operators and partner carrier resources.

Highway moves are well suited for shipments requiring expedited delivery and to access destinations where intermodal service is not readily available. You can rely on Axsun to ship your goods between any point in Canada, the USA and Mexico. We are a Canada Customs Bonded Carrier and provide:

- Full load, LTL and partial Truckload service
- Local cartage and drayage services
- An extensive chassis fleet at our Toronto and Montreal facilities to suit any container types
- Flatbed, heavy haul and temperature controlled services
- Full visibility and enhanced service capabilities through SAP technology

"With SAP technology, we create shipment visibility and reporting far beyond industry standards."

We have the transportation network to perform

Our logistics offering combines our assets and partner carrier resources to deliver a wide range of Truckload and LTL services. The implementation of SAP technology several years ago, served to streamline our processes, creating shipment visibility and reporting far beyond industry standards.

We take a proactive approach to our clients' freight management requirements. Using our decades of logistics experience to our clients' advantage, we are able to deliver solutions that both create service enhancements and match their freight procurement expense guidelines.

The dedicated professionals that man our logistics department take great pride in marrying our extensive resources to deliver a wide range of transportation services throughout Canada, the USA and Mexico. These include:

- Domestic Truckload and LTL service throughout Canada
- Cross-border FCL intermodal and highway service
- Warehousing and distribution programs
- Specialized equipment requirements including flatbed and heavy haul
- Northbound, Southbound and all NAFTA markets
- International air and ocean services for the convenience of existing customers

We serve select ports and rail yards through our strategic Axsun locations

For greater performance and control, our company chassis fleet is available to pick up and deliver our North American customers' ocean and rail containers. It's an integral part of our total service package. Along with reducing expensive demurrage charges, we can accommodate the effective stuffing and de-stuffing of all container types. Our facilities are located at primary distribution points with ready access to key ports and rail yards.

Our modern company owned trucks are balanced with an owner operator fleet at each of our locations. This allows us to meet seasonal swings in activity across a wide range of customers, importing containers from origins worldwide or shipping domestically within

Canada and the USA. Our chassis fleet can accommodate both 20 and 40' sea containers and 53' domestic containers. We provide quick delivery to your door or ours, for your further distribution requirements.

Customers without their own distribution facilities, rely on us to complete the distribution process. We provide pick and pack services for furtherance by both intermodal and highway modes throughout North America. Or, we can offer both short and long term storage of your goods at our modern warehousing facilities while further distribution plans are being confirmed.

We have the distribution capabilities to meet your exact requirements

We have our own Axsun staff and facilities in strategic centres located throughout Canada, the USA and Mexico. Our warehousing and distribution offering is provided as a complementary service for our core client base. Our single source promise mandated that we provide a comprehensive menu of services to meet our customers’ complete requirements.

Our head office in Montreal is our most active warehousing location. It’s home to the world’s largest inland port and the second busiest port in Canada. The introduction of SAP technology greatly enhanced our abilities to manage and communicate inventory levels and critical shipment data in real-time. We can also bridge technologies to communicate to other leading systems like Oracle warehouse management software.

Our customers love the flexibility of outsourcing to Axsun for their seasonal and promotional surges, specialized packaging and primarily, short-term warehousing requirements. Our Montreal facility has an effective cross-dock operation for de-stuffing import containers for North American distribution. We also build containers for exports to points worldwide. Additional features include:

- North American network of facilities for increased capacity and coverage
- C-TPAT and HACCP food grade facilities
- Short and long-term warehousing
- Fulfillment, kitting and complete pick and pack services

"Our strategic locations enable us to manage the distribution of your freight between Canada the USA and Mexico."
